

Name: _____

Date: _____

You will be graded on the following criteria. Take the time to ensure you have completed each item successfully.

Item	Points Possible	Points Earned
Georgia or other serif font throughout, 1em default.	3	
Some shade of dark gray background.	2	
Region in center is 3/4 the width of the screen with margins on the top and bottom of 40 pixels.	5	
Region in center should not grow wider than 1024 pixels or shrink narrower than 360 pixels.	5	
Region in center should have a white background, reasonable padding, and rounded edges.	5	
Region in center should have a dark shadow at the bottom and right.	5	
Heading of page should be noticeably larger than the subheading, both of which are left-aligned.	5	
Links in navigation bar should be white, not underlined, turn yellow when hovered over, and turn some shade of tan when active. The background should be black.	10 (2 pts. each)	
Links in navigation bar should each be 1/6 the width of the screen, with some padding on the left and right to prevent getting squished together when the page is made narrow.	5	
The giant image in the center should resize with the browser.	5	
The caption of the image should be right-aligned, in italics, and with a font size smaller than that of the subheading but larger than that of the main content.	5	
The main content should start with 3 columns of 250 pixels and be able to shrink down to one column as needed. There should be reasonable spacing between the columns and a gray vertical separator.	10 (2 pts. for 3, 2, 1 columns, 2 pts. for spacing, 2 pts. for separator)	
The paragraphs of the main content should be indented and justified.	5	
There should be some white space between all the elements of the page. No element should be jammed up against another.	5	
When printing the document, there should be one wide column of text that spans the width of the page.	5	
When printing the document, the background should be white and no shadows should be present.	5	
CSS3 should work in all browsers. Browser-specific prefixes are present for features in development.	5	
CSS3 code is properly indented (2 spaces) throughout.	5	
CSS3 code shows no errors in jigsaw validator.	5
