HTML Hackathon Goals

Your goal is to write valid HTML 5 for the web page depicted in the image. It must validate on https://html5.validator.nu/.

The links for the navigation bar are as follows:
- http://www.stevens.edu
- http://www.w3.org
- http://www.stevens.edu/ses/cs

Tips:

- Do not attempt to style anything.
- Be sure to use organizational HTML 5 tags.
- You may use the border="1" attribute for the table until you see that it looks right. Then remove it, since it does not validate.
- Do not use div, table (except for the Yoda's table mystery), or span tags in this web page. There is no need.
- You may use Google, http://www.w3schools.com/tags/default.asp, documents posted in Canvas, and our in-class projects to help you with your task. You may **not** share ideas with a friend.

Rename the html file to *yourlastname.html* and upload it to Canvas by the end of the period. Submissions must be received by 9:55 A.M. for the morning class and 2:55 P.M. for the afternoon class.
